1 Lyall's Wren Journal, a global presentation

1.1 Overview

Lyall's wren Journal is a web journal dedicated to (scientific) ecology, ethology and evolution. Its main objective is to offer an online review that presents sourced, accessible, and understandable biological information.

LWJ will be published at irregular intervals. The style is subject to changes. Any error will be corrected.

Some sources might not be freely accessible and are accessible to me via my University. We don't think that's a problem because using them makes them accessible to anyone, and they still can be verified.

1.2 Objectives

- **Scientific mediation:** Popularize concepts and discoveries in biology and ecology.
- **Scientific news:** Present the new studies and knowledge on those topics.
- **Reliable sources:** All published information is accompanied by scientific references.
- **Accessibility:** Make science accessible to the general public, regardless of their level of knowledge.

1.3 Name and Design

The name of the journal is the name of a bird, the Lyall's Wren. This bird is an extinct bird that was endemic of the Stephens island. The cause of the extinction is endemic ; some ferals cats were introduce in the island and killed them all in one year (Medway 2004) (Galbreath and Brown 2004). This bird is a symbol of the vulnerability of the biodiversity in the face of endemic disruptions.

The articles and the website are all my own creation. The articles are written with $\text{\LaTeX}$ and the bibliographies are made with Zotero. The logo image is a drawing by John Gerrard Keulemans in 1895, under CC0 licence.

2 More precise information

2.1 Errors found

If you find an error, please make a report at lwj.journal@gmail.com.

Format :

To : lwj.journal@gmail.com

Object : Error in [article title] : [error type]

Content :

[article title] [page] [column(left/right)] [lines]

[Explain the error (misinterpretation of the X study, another source said the opposite [Join the source]).]

2.2 Founder and Intention declaration

I am currently pursuing a bachelor's degree in biology, with a focus on ecosystem ecology, currently in the third year.

I am particularly interested in the interactions within large animal groups, such as bird flocks, fish schools, and animal societies like ants, naked mole rats, meerkats... I am more likely to write about wildlife. My aim is to deliberately compensate for the bias in knowledge about birds and mammals, by talking more about "reptiles", amphibians, "fishes", arthropods, mollusca, and all other taxonomy classes.

My writing may reflect certain biases, including an anti-speciesist perspective and a preference for minimizing disturbance to wildlife, plant life and microfauna. I am french speaker, so I may make mistakes in English, sorry about that.

2.3 Contribution

Anyone interested in science communication or biology can contribute to the project via GitHub, as long as the article follows the same format and is sourced.

For each article, you'll need to make an html page and a pdf with $\text{\LaTeX}$ The packages and the theme I use with $\text{\LaTeX}$ are on the GitHub : <https://github.com/lwjjournal/lwj>.

Make a commit. Sources will be verified before publication.

Open source project licensed under MIT.
